

PHONE PATCH UNIT

A phone patch unit is an adapter circuit between the radiotelephone and a 600 ohm telephone network.

The phone patch unit can be used to connect the interphone on board to the radiotelephone station.

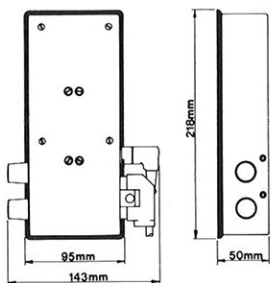

The phone patch unit can be used to connect the public telephone network to the radiotelephone station.

The radiotelephone has to work full duplex (with built-in duplex filter or two aerials).

CONTROLS

- Normal:** The radiotelephone and the telephone network work normally.
- Phone patch:** The radiotelephone is connected to the telephone line and the transmitter is keyed constantly.
- Phone patch level:** Adjustment of the signal level from the telephone line so that the lamp is just flashing.

DIMENSIONS

SAILOR Phone Patch H1224

to be used in conjunction with SAILOR Programme 1000/1000/B Radiotelephone.
