

LINK/4000 SSB

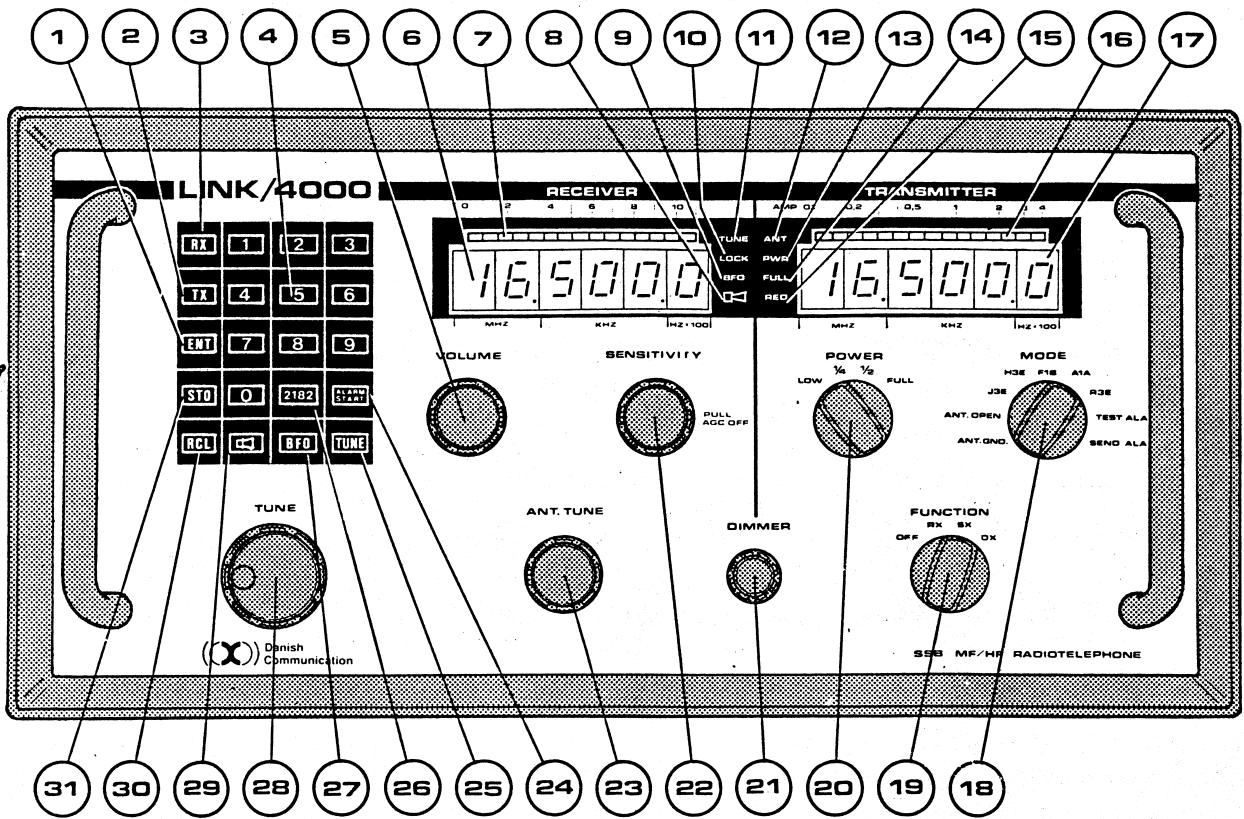

USER'S MANUAL

1 EDITION SC 2.0X

Serial no.

Software code.

D I S T R E S S O P E R A T I O N

1. Switch on the station with "Function" switch (19).
2. Set "MODE" switch (18) in position "Send Alarm".
3. Press the red "2182" kHz key (26). Wait until the "Tune" text disappears from the TX display (17).
4. Press the "ALARM START" (24), and the alarm signal is transmitted for 45 secs.
5. When the alarm stops (the light in the "PWR" lamp is switched off). Communicate normally.

1.0 S W I T C H O N

Turn "Function" switch (19) to position "RX", "SX" or "DX" and the LINK will automatically start a "Self-test" routine.

During this "Self-test" all segments are first turned on in the display. Thereafter a software code will be displayed e.g. S.C 2.01 010110.

Should faults be found during the "Self-test", these "Errors" will be listed on the display in numerical order.

The "Self-test" being completed, the transceiver is automatically adjusted to the set-up, which was displayed when the station was switched off.

R E C E I V E R F U N C T I O N S

2.0 RX FREQUENCY

- 2.1 Select the wanted modulation mode by means of "MODE" switch (18).
- 2.2 Press the "RX" key (3) which will clear the RX display (6).
- 2.3 Key the wanted frequency by pressing the number keys (4).
- 2.4 Press the key "ENT" (1), and the receiver is ready.

Should the keyed frequency lie outside the permitted band, the display will show "HELP 3", and the RX display will thereafter start flashing. Repeat the above procedure from point 2.1.

3.0 CLARIFIER, BFO and RX FREQUENCY TUNE

The "TUNE" knob (28) functions as clarifier, as RX Frequency Tune and as BFO control. The lamps "TUNE" (11), "LOCK" (10) and "BFO" (9) shows the current function.

When the lamp "TUNE" (11) is turned on, the "TUNE" knob (28) functions as RX Frequency Tune.

When the lamp "LOCK" (10) is turned on, the receiver frequency is locked.

When the lamps "TUNE" (11) and "LOCK" (10) are switched off at the same time, the "TUNE" knob (28) functions as clarifier control.

Change between "TUNE", "LOCK" and "CLARIFIER" is achieved by pressing the "TUNE" key (25).

When the lamp "BFO" (9) is turned on, the "TUNE" knob (28) functions as BFO control.

After each receiver frequency set-up there will be an automatical change to the "CLARIFIER" function.

By pressing the key "ENT" (1), the "LOCK" function is achieved.

3.1 CLARIFIER

Press the "TUNE" key (25) once or twice until the lights in the lamps "TUNE" (11) and "LOCK" (10) are switched off. The "TUNE" knob (28) functions now as clarifier control, and the receiver frequency can be moved \pm 350 Hz.

When an RX frequency has been keyed, the "TUNE" knob (28) will automatically function as clarifier control.

3.2 RX FREQUENCY TUNE

Press the "TUNE" key (25) once or twice until the light in the lamp "TUNE" (11) is turned on. The receiver frequency can now be moved freely up and down with the "TUNE" knob (28).

Press the number key "1" (4) and the frequency is changed in steps of 10 Hz. (Is automatically selected by switching on the station).

Press the number key "2" (4) and the frequency is changed in steps of 100 Hz.

Press the number key "3" (4) and the frequency is changed in steps of 1 KHz.

Press the number key "4" (4) and the frequency is changed in steps of 10 KHz.

In mode H3E each step is multiplied by 10 e.i. 1 = 100 Hz steps, 2 = 1 KHz steps etc. Having completed the tuning, press the key "TUNE" (25) or the key "ENT" (1) and the frequency is locked (the lamp "LOCK" (10) is switched on).

3.3 BFO CONTROL

In mode A1A (morse) the "TUNE" knob (28) can function also as BFO control.

Press the "BFO" key (27) and the light in the "BFO" lamp (9) is turned on. It is now possible to adjust the BFO frequency from 0 to \pm 3 KHz in steps of 33 Hz with the "TUNE" knob (28).

4.0 LOUDSPEAKER ON/OFF

The loudspeaker can be switched on and off with the LS key (29). The lamp (8) is lit when the loudspeaker is connected.

5.0 VOLUME CONTROL

The volume in the loudspeaker and in the micro-telephone is controlled with the knob "VOLUME" (5).

6.0 RECEIVER SENSITIVITY

The sensitivity of the receiver is adjusted with the knob "SENSITIVITY" (22). The meter (7) indicates the signal strength.

By pulling the "SENSITIVITY" knob the AGC of the receiver can be disconnected.

7.0 RECEIVER ANTENNA TUNE

The function of the receiver "ANT TUNE" knob (23) is optional and is not mounted in a standard LINK equipment.

When this option is installed, it is possible to adjust the receiver to maximum sensitivity in Duplex mode ("DX").

T R A N S M I T T E R F U N C T I O N S

8.0 TX FREQUENCY

8.1 Set the "FUNCTION" switch (19) in position "SX" or "DX".

8.2 Select the wanted mode with the "MODE" switch (18).

8.3 Press the key "TX" (2) which will clear the display (17).

8.4 Key the wanted frequency with the number keys (4).

8.5 Press the key "ENT" (1) and the automatic antenna tuner T210 starts operating. While the tuner is being adjusted, the TX display (17) shows the text "Tune".

After 5-10 seconds the text "Tune" disappears from the display, and the transmitter is ready for use.

Should the keyed frequency lie outside the permitted band, the display shows "HELP 3", and the TX display will thereafter start flashing. Repeat the above procedure from point 8.1.

The antenna current meter (16) will show WSWR during the tuning.

9.0 POWER SELECTION

The output power of the transmitter is selected with the "POWER" switch (20).

In position "LOW" the output power is 50W PEP

In position "1/4" the output power is 100W PEP

In position "1/2" the output power is 200W PEP

In position "FULL" the output power is 400W PEP

Full power having been selected, the lamp "FULL" (14) is turned on.

At other power levels the lamp "RED" (15) is lit.

Full power is not permitted in mode F1B (telex).

If the LINK has automatically reduced the power to a lower level than that selected with the "POWER" switch, the lamp "RED" (15) will flash. E.g. by tuner overheating ("Error 46").

10.0 OTHER TRANSMITTER FUNCTIONS

During transmission the meter (16) will indicate the antenna current.

The lamp "ANT" (12) is lit when the antenna relay is active.

The lamp "PWR" (13) is lit when the transmitter is keyed.

PROGRAMMING OF CHANNELS/RECALLING CHANNELS

In a standard LINK radiotelephone the user can himself program up to 99 channels (freq. pairs). Channels Nos 1-99 are reserved for this purpose.

Channels Nos 101-355 are programmed by the factory according to the user's specifications (totally max. 255 channels).

In addition to the above a standard LINK is programmed with all international telephone channels, ship to ship simplex channels, telex channels and international telegraphy call channels. Totally 552 channels.

11.0 CHANNEL PROGRAMMING

Prior to programming a channel, the wanted frequencies must be set up as described under points 2.0 and 8.0.

- 11.1 Press the key "STO" (31) RX and TX, display (6) (17) will show C O.
- 11.2 If only the transmitter or the receiver frequency is to be programmed/changed, press either "RX" (3) or "TX" (2). Otherwise proceed to point 11.3.
- 11.3 Key the wanted channel number with the number keys (4) (max 99).
- 11.4 Press "ENT" (1), and the channel is programmed.

Should the keyed channel number be higher than 99, the display will show "HELP 2". In this case repeat from point 11.3.

12.0 RECALLING CHANNELS

- 12.1 Select the wanted modulation mode with "MODE" switch (18).
- 12.2 Press the key "RCL" (30), RX and TX display will show C O.
- 12.3 If only the transmitter or the receiver frequency is to be recalled, press either "RX" (3) or "TX" (2). Otherwise proceed to point 12.4.
- 12.4 Key the wanted channel number with the number keys (4).
- 12.5 Press the key "ENT" (1), and the channel is recalled. T210 will automatically start the adjustment to the new transmitter frequency.

If the keyed channel number is not available, the display will show "HELP 2". Repeat from point 12.1.

If the recalled frequency is prohibited in the selected modulation mode, the display will show "HELP 7". Select the correct modulation form with "MODE" switch (18) or repeat from point 12.1.

If no RX frequency has been programmed into the recalled channel, the display will show "HELP 4".

If no TX frequency has been programmed into the recalled channel, the display will show "HELP 5".

NOTE! The international channels are defined by the current modulation mode, the band expressed in MHz succeeded by a serial No. I.e. mode "J3E" CH 1216 is the telephony channel 16 in the 12 MHz band. This frequency pair (channel) is not the same as e.g. "F1B" CH 1216.

Should the user want to see the current channel number, he should press "ENT" (1) and the channel number will be displayed for 2 seconds.

AUTOMATIC FREQUENCY STORAGE

Each time a receiver or a transmitter frequency is changed, the preceding frequency will be stored in a special storage location. Such frequencies can be recalled by pressing "RCL" (30), "ENT" (1).

If recall of only the RX or the TX frequency is wanted, press "RCL" (30), "RX" (3) or "TX" (2), "ENT" (1).

13.0 OTHER FUNCTIONS

13.1 FUNCTION SELECTION

RX, SX or DX can be selected with the "FUNCTION" switch (19).

In position "RX" the transmitter unit is switched off and the TX display shows "OFF".

In position "SX" the station operates in simplex mode.

In position "DX" the station operates in duplex mode (duplex installation is necessary for operating duplex).

13.2 MODE SELECTION

The modulation mode etc is selected with "MODE" switch (18).

In position "J3E" the station operates in USB.

In position "H3E" the station operates in USB Full Carrier.

In position "F1B" the station operates in Telex mode (600 ohm line input is automatically selected).

In F1B mode the transmitter and the receiver frequency will also be automatically offset by -1.5 KHz, which means that the user has keyed the "assign frequency" direct.

In position "A1A" the station operated in CW (morse).

In position "R3E" the station operates in USB Reduced Carrier.

In position "ANT. OPEN" the antenna will be open and the transmitter and the receiver will be switched off (RX and TX display shows "OFF").

In position "ANT. GND" the antenna is grounded and the receiver and the transmitter will be switched off (RX and TX display shows "OFF").

In position "TEST ALARM" the station operates in "H3E" mode, and the transmitter, the receiver and the alarm generator can be tested. When the "MODE" switch is in position "TEST ALARM", the transmitter and the receiver will automatically be set at the test frequency 2.2 MHz and T210 is adjusted to the built-in dummy load.

Press the key "ALARM START" (24) and the alarm signal can be heard in the microtelephone.

The alarm stops automatically after 45 seconds but can also be stopped by re-pressing the "ALARM START" key (24).

In position "SEND ALARM" the station operates in "J3E" (USB) mode, and the alarm signal can be transmitted by pressing "ALARM START" (24).

13.3 AUTOMATIC 2182 SELECTION

Press the key "2182" (26) and both receiver and transmitter will be set at 2.182 MHz. "FULL POWER", "SX" and "H3E" mode are selected automatically, and the decimal points in the display will start to flash.

When the station is in automatic "2182" mode, the "POWER" switch (20), the "MODE" switch (18) and the "FUNCTION" switch (19) do not function.

Press the key "ENT" (1), and the station functions as normally (the decimal points will stop flashing).

HELP Ø = INVALID MODE
 HELP 1 = INVALID KAY
 HELP 2 = INVALID CHANNEL/LOCATION NO
 HELP 3 = INVALID RX/TX FREQUENCY IN MODE
 HELP 4 = RECALLED RX CHANNEL/LOCATION EMPTY
 HELP 5 = RECALLED TX CHANNEL/LOCATION EMPTY
 HELP 6 = TX KEY BLOCK
 HELP 7 = MODE/FREQUENCY CONFLICT

1 = telegrafi som børebølge

2 = sidebånd under 10 MHz

3 = sidebånd over 10 MHz

4 = AM

Power omskifter virker kun
ved antennetuner tilsluttet
uden tuner sættes power
automatisk til full man-
set omskifter stillingen

Sidebandsfilter til sender ikke
monteret til bånd under 10 MHz
