

Product: TRP 9500 S

SUBJECT: NEW TRANSCEIVER AND ATU
SOFTWARE FOR TRP 9500 S

SKANTI has the pleasure hereby to introduce a new enhanced Transceiver and Antenna Tuning Unit software version for the TRP 9500 S.

ATU 9500 ver. 01.02:

1. Better performance for tuning inductive antennas at low frequencies.
2. New procedure for calculating the needed capacitance of Capacitor Bank II may in some cases increase the tuning time.

TU 9500 ver. 01.02:

1. Remote protocol system changed to include full NMEA protocol.
2. TX INHIBIT input on PCB 937 'AUX' connector pin 8 can be configured to reduce the RF output power.
3. TX KEYED output on PCB 937 'AUX' connector pin 5 corrected.
4. Continuous read-out added in Prog 51 - 53 and 74.
5. HST (High Speed Telex) mode added.

For further information, kindly contact the SKANTI service department.
